The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, semined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond with the exception of being grown by man (a manufactured product). This is a manufactured (man-made) alamond produced by CVD (chemical vapor deposition) or by HPH (high pressure high temperature) growth processes and may include post-growth treatments to alter the color. I.G.I. employs and utilizes those techniques and equipment currently available to I.G.I. including, without limitation. 10X magnification, connected tiple! louge, bioncular microacope, master color compation stores and/or processes as deemed appropriate by I.G.I. In the case where diamond meles is set in a mounting, a created origin will be performed. This Report Includes davanced security features A duly accreated origin will be performed. This Report Includes davanced security features and intervietationship between cut, color, catiny and carativelyth.
